

Knives for 3M Reflective Sheeting

WILD
ZUND

suitable on TA 410/400 Series, TA 510/500 Series

suitable on M and L Series

KNIFE TYPE	KNIFE IMAGE	APPLICATION DESCRIPTION	ARTICLE NUMBER	price in US\$ per piece	
				ORIGINAL	* QUANT.
TYPE 2 (No.11)		knife 30/35° , single edge Scotchlite and High Intensity, kiss cutting, smaller graphics (1/2" text and smaller) Note: Fairly sturdy tip despite the single edge cut.	ME457288	22.00	21.00
TYPE 4 (No.11 sharp)		knife 30/55° , single edge Scotchlite and High Intensity, through/die cutting only, smaller graphics (1/2" text and smaller) Note: sensitive/needle like tip requires great care of user.	ME506152	22.00	21.00
TYPE 5 (No.15)		knife 30/30° , double edge Scotchlite and High Intensity, kiss cutting of larger graphics (1/2" text and larger) Note: covers the largest range of vinyls, sturdy and long lasting tip due to double edge cut.	ME506168	22.00	21.00
TYPE 5 S (No.15 sharp)		knife 30/50° , double edge Scotchlite, High Intensity and limited use on Diamond Grade and VIP, kiss and through/die cutting, works on smaller and larger graphics. Note: The sturdy tip and the steep cutting edge makes this knife very versatile on applications.	ME506168S	26.00	24.00

Knives for 3M Reflective Sheeting

KNIFE TYPE	KNIFE IMAGE	APPLICATION DESCRIPTION	ARTICLE NUMBER	price in US\$ per piece	
				ORIGINAL	* QUANT.
TYPE 7 (No.12-20)		knife 20/40° , single edge Scotchlite, High Intensity, Diamond Grade and VIP, through/die cutting knife. Note: the thin front part of this knife requires great care of user.	ME559700	44.00	42.00
TYPE 9 (No.12 X)		knife 30/40° , single edge with micro-rounded tip. Scotchlite, High Intensity, Diamond Grade and VIP, through/die cutting knife. Note: the micro-rounded tip improves the chip resistance of the tip and makes this knife our recommended type for all denser material through/die cut jobs.	ME559900	44.00	42.00
(No.16)		knife extracting-tool	WE477996	12.00	

Setting Tips: a modified Knife Holder (steel tip) is recommended for durability (stress on tip is significantly increased).

For Through/Die Cutting:

Start setting the depth as the manual describes, instead of 7 increments or one full turn down after the knife tip touches the surface, adjust the knife tip directly on the underlay material. After touching in the down position – add 4 inc. on the depth. Use the **SILVER Pressure Screw on the knife holder and almost lock the front by increasing the pressure high.**

The knife will cut into the underlay material – not through it.

The use of either VILEDON or TEXON is highly recommended to prevent carving the plotter surface.

JOB Settings – please call us to program the Plotter over the phone - Reserve JOB No. 9 for this application.

MINIMUM ORDER 5 PIECES, DELIVERY for Quantities over 20 FREE IN THE US. via Priority Mail
